

# PARTS LIST

Part	Description	Qty	Part	Description	Qty
1	Saddle pad	1	25	Spring washer M10	8
2	Saddle pin	1	26	Washer M10	2
3	Saddle	1	27	Handle socket shaft	2
4	Lifting arm assembly	1	28	C-clip Ø12mm	1
5	Shaft for front wheel	1	29	Roller	1
6	Connecting bar	2	30	Handle socket screw M10X19mm	1
7	C-clip Ø16mm	2	31	Handle socket	1
8	Side frame	2	32	Pin for roller	1
9	Front wheel	2	33	C-clip Ø12mm	1
10	Sleeve for front wheel	2	34	Handle socket stop	1
11	Washer M12	2	35	Button-head socket cap screw M10X20mm	6
12	Nut M12	2	36	Cover plate	1
13	Position rod	1	37	Connecting rod pintle	2
14	Flat-head socket cap screw M8X20mm	4	38	Handle assembly	1
15	Spring washer M8	6	39	Foam protective pad	1
16	Button-head socket cap screw M8X20mm	6	40	C-clip Ø 25mm	2
17	Carrying handle	2	41	Cotter pin Φ4x40mm	1
18	Washer M8	2	42	Return spring	2
19	Sheet metal screw M4X16mm	4	43	Cotter pin Ø4x40mm	1
20	Spring washer M12	6	44	Power unit assembly	1
21	Button-head socket cap screw M12X25mm	6	45	Oil plug	1
22	Caster base	2	46	Steel ball Ø6mm	1
23	Rear caster assembly	2	47	Universal joint assembly	1
24	Button-head socket cap screw M10X25mm	2	48	Seal kit	1

ALUMINUM HYDRAULIC
GARAGE JACK
OPERATION MANUAL

Please wear proper safety gear while working.

KT NO.	Capacity (T)	Min height (mm)	Max height (mm)
9TY153-03A-B	3	100	465

## READ ALL INSTRUCTIONS BEFORE USE

- Study, understand, and follow all instructions before operating this device.
- Failure to heed these markings may result in serious personal injury and / or property damage.
- Prior to each use, visual inspection shall be made to the device by checking for abnormal conditions, such as cracked welds, leaks, and damaged, loose, or missing parts.
- · Do not exceed the rated capacity stated.
- · Use only on hard level surfaces.
- This item is to be used as a lifting device only. Immediately support the vehicle with appropriate rated iack stands after lifting.
- Do not move the vehicle while it is on the jack.
- Lift only on areas of the vehicle as specified by the vehicle manufacturer.
- No alterations shall be made to this product.

#### LIFTING

- Turn the handle/release valve clockwise to the closed position. Do not over tighten.
- Position the jack under the specified lift point.
- Begin lifting by pumping the handle up and down.
- Immediately support the vehicle with appropriately rated jack stands after lifting.
- Turn the handle/release valve slowly counterclockwise to lower the vehicle onto jack stands.

# LOWERING

- Turn the handle/release valve clockwise to the closed position. Do not over tighten.
- Pump the handle up and down to lift vehicle off jack stands.
- Remove the jack stands. Do not get under or let anyone get under the vehicle while lowering.
- Turn the handle/release valve slowly counterclockwise to lower the vehicle onto the ground.

# MAINTENANCE

#### **CHECK AND REFILL OIL:**

- With the jack in the fully lowered level position, if unit cover is provided, remove unit cover, then remove oil filler plug.
- Proper oil level should be just cover inner cylinder as seen from the oil filler plug hole.
- Do not overfill. Always fill with new, clean hydraulic jack oil as recommended above.
- Reinstall oil filler plug, then reinstall unit cover.

**NOTICE**: Use high grade hydraulic oil only. Never use brake fluid, motor oil, transmission fluid,turbine oil or any other fluids.

## LUBRICATION AND CLEANING

• Periodically clean and lubricate all moving parts and pivot points.

## AIR VENTING PROCEDURES

- With the jack in the fully lowered position, unlock release valve, remove oil filler plug.
- Pump the handle rapidly several mins. Reinstall oil filler plug.
- Turn the handle/release valve clockwise to the closed position.
- Pump the handle until the arm reaches maximum height and continue to pump several mins. to remove trapped air in the system.
- Turn the handle/release valve counterclockwise in one full turn and lower arm to the lowest position. Use force on saddle if necessary.
- · Carefully and slowly loosen oil filler plug to release pressurized air.
- Repeat above steps until trapped air is completely vented.

## INSPECTION

- Visual inspection shall be made before each use of the device by checking for abnormal conditions, such as cracked welds, leaks, and damaged, loose, or missing parts.
- This device shall be inspected immediately if the device is believed to have been subjected to an abnormal load or shock.

# TROUBLESHOOTING

properly after trying solution.

Problems	Causes	Solutions
Jack will not lift the load.	<ol> <li>Release valve not tightly closed.</li> <li>Low oil level.</li> <li>Defective or worn internal parts.</li> <li>Load exceeds maximum allowance.</li> </ol>	<ol> <li>Tighten release valve.</li> <li>Check and add oil.</li> <li>Discontinue use and contact a local repair center.</li> <li>Use a higher capacity jack.</li> </ol>
Jack will not hold the load.	Release valve not tightly closed.     Power unit malfunction.	Tighten release valve.     Discontinue use and contact a local repair center.
Jack will not descend to minimum height, or will not remain in lowered position.	Air trapped in system.     Reservoir oil overfilled.	Check and ensure proper oil level.     Vent air out of system. Follow "AIR     VENTING PROCEDURES" instructions.
Jack will not lift to max height.	1. Low oil level.	Check and ensure proper oil level.     Follow "MAINTENANCE" instructions.
Jack will not function	1. Internal malfunction or	1. Discontinue use and contact a local repair

center.

structural damage.
